Risk Assessments

Identifying hazards is an essential part of effective occupational health and safety. With domeba's software module Risk Assessments, you can create risk assessments, prepare workplace safety instructions and effectively distribute them to your staff. This helps lay the groundwork for a safer working environment throughout your organisation.

To aid you in creating risk assessments quickly and easily, the system includes risk catalogs from various employers' liability insurance associations as well as numerous sample templates that can accessed at any time.

Hazard catalogues
